PRESS RELEASE

Strukton Railinfra will measure 3200 kilometres of Danish rail infrastructure

Utrecht, December 2006

Strukton Railinfra will take a zero measurement of the track and catenary on the main part of the rail system in Denmark. The Danish infra manager, Banedanmark, has awarded Strukton Railinfra the contract to do so.

The UFM 120 inspection train of Eurailscout will measure 3200 km of the Danish track and catenary between December 5th and December 20th in twelve runs.

The analysis software IRISSYS (International Railway Inspection and Services System) developed by Erdmann Software GmbH will process the measurement data and present the data graphically. Banedanmark will buy a temporary license for the IRISSYS software and will train a number of its maintenance engineers into the use of the system.

Banedanmark and Strukton Railinfra Development & Technology will analyse the outcomes of the measurements. The status of the infrastructure will be presented to the management of Banedanmark at the beginning of February 2007.

Strukton Railinfra is a full-service provider of rail systems in Europe and contributes to a safe and reliable infrastructure. Eurailscout, a participation of Strukton Railinfra, is a specialist in the measurement of the condition of rail systems.
