NedTrain ([www.nedtrain.nl](http://www.nedtrain.nl))

### Country

The Netherlands

### Date of delivery

March 2011

### Project summary

- Revision and modification of air-conditioning units
- Changing electrical wiring
- Expanding electrical wiring
- Adjusting and testing
- Transport to NedTrain Haarlem

## VIRM Train air-conditioning units

As commissioned by NedTrain, Strukton Rolling Stock revises and modifies existing air-conditioning units on VIRM trains.

The work is carried out at Strukton's workshop in Hengelo. In part, this involves technical work on cooling units carried out by STEK technicians including the adjustment of cooling and measurement pipes. In addition, Strukton Rolling Stock changes and expands the electrical wiring for security purposes as well as for the engines.

Finally, Strukton Rolling Stock takes care of adjusting and testing the units using an advanced testing system.
